

Chapter 7 Notes

Matt Warner

Example 0.1

In each of the following statements, identify the underlined number as the value of the population parameter or a sample statistic.

a) IN a recent survey of young adults, 66% of millennials said they “always believed the world is round”

66% is a statistic, a survey is a sample.

b) A spokesperson for Google reported that the proportions of all people working for the company who were woman is 0.31

Parameter - $p =$ % of population

c) The U.S. Dep

This is a summary of all bridges in the U.S, this is a parameter. $\mu =$ mean of population

d) The manager of a large hotel

statistic - $\bar{x} =$ mean of sample

e)

statistic - $\hat{p} =$ % of sample

Question 1

during August, the hottest month of the year in Houston...

What is the probability that the sample mean rainfall is less than 3.3 in

We know the μ and σ , but not the shape

$$P(\bar{x} < 3.3)$$

The shape is approximately normal, because $n = 30$

$$\sigma = \frac{1.1}{\sqrt{30}} = 0.2$$

$$\begin{aligned} P(\bar{x} < 3.3) &= P\left(Z < \frac{3.3 - 3.54}{.2}\right) \\ &= P(z < -1.20) = .1151 \end{aligned}$$

What is the probability that the sample mean is greater than 3.9?

that is,

$$P(\bar{x} > 3.9)$$

Convert to Z,

$$\begin{aligned} P(Z > 3.9) &= \frac{3.9 - 3.54}{.2} = 1.80 \\ &= .9641 \end{aligned}$$

Now we find what's to the right by subtracting 1.

$$\begin{aligned} 1 - .9641 \\ = .0359 \end{aligned}$$

Question 2

“ then this page can't be done we would not know sampling dist. of
